

## How to setting static ip on ubuntu server 18.04

To setting static ip on ubuntu server 18.04, you must edit file with name "50-netcfg.yaml, this file can be find at **/etc/netplan/50-netcfg.yaml**

1. `sudo vim /etc/netplan/50-netcfg.yaml`
2. edit file 50-netcfg.yaml with this configuration

```
# This file is generated from information provided by
# the datasource. Changes to it will not persist across an instance.
# To disable cloud-init's network configuration capabilities, write a file
# /etc/cloud/cloud.cfg.d/99-disable-network-config.cfg with the following:
# network: {config: disabled}
network:
  ethernets:
    enp3s0:
      addresses: [192.168.0.102/24]
      gateway4: 192.168.0.1
      nameservers:
        addresses: [192.168.0.1,8.8.8.8]
      dhcp4: no
  version: 2
```

3. run this command bellow
